ALEXANDRIA

CONTENT INTELLIGENCE FOR WEBSITES THAT CANNOT AFFORD TO AGE

FOUNDER: JOSE | SEO AGENCY OWNER

PUBLIC HACKATHON PRODUCT | JULY 2026

THE AGENCY PROBLEM

I'm Jose. I own an SEO agency, and some of our clients have thousands of valuable web pages.

One of our hardest jobs is keeping every statistic, deadline, policy, and recommendation aligned with what is true right now. The work is painfully manual, and inaccurate information still gets flagged before a team can find and fix it.

Even after we update a page, the world changes again. Doing this once is editing. Doing it continuously across thousands of pages is an intelligence problem.

01 CONTENT AT SCALE

Manual audits are slow, expensive, and incomplete.

02 ACCURACY RISK

Outdated facts erode trust and trigger client escalations.

03 PERPETUAL CHANGE

A newly updated page can start aging again tomorrow.

THE WARNING

The first Alexandria burned. The modern one decays one outdated page at a time.

THE SOLUTION

Alexandria watches what changed, finds where it matters, and prepares cited replacement copy for human approval.

1 ENTER
A website domain

2 DISCOVER
Priority pages and new sources

3 READ
The complete live page

4 VERIFY
Claims against current evidence

5 ACT
Before/after content patch

THE YOU.COM ENGINE

SEARCH API

Discovers pages, news, and authoritative sources.

DISCOVERY + FRESHNESS

CONTENTS API

Reads clean, current content from the live page.

FULL PAGE EXTRACTION

RESEARCH API

Reasons, cross-checks, cites, and structures findings.

VERIFICATION + CITATIONS

WHAT WORKS NOW

- Public interactive product
- Live priority scan with a valid API key
- Cited findings and severity
- Before/after patches with export

PRODUCTION ROADMAP

- Server-side API access
- Sitemap batching for thousands of pages
- Persistent monitoring and alerts
- Draft-only CMS integrations
